KRCC

About the Company

We are a specialized construction company with extensive experience in high-quality waterproofing and contracting solutions for commercial, residential and industrial projects.

Our commitment to excellence, professionalism and customer satisfaction has established us as a trusted partner in the construction industry.

Spray Foam Roofing

Waterproofing Membrane

Epoxy Flooring

Our Vision

To be the most respected construction and waterproofing service provider, recognized for our commitment to quality, innovation and customer satisfaction.

Our Mission

To deliver exceptional construction and waterproofing solutions by maintaining the highest quality standards, adopting modern techniques and developing a skilled team that exceeds client expectations.

Quality Policy

We are committed to continuous improvement in our processes, materials and workmanship to ensure durable, reliable and cost-effective solutions that meet international standards and client requirements.

Safety Is Our Priority

We are concerned for the well-being of our employees and, accordingly, are committed to providing a safe and healthy environment by providing active leadership, support, and a willingness to cooperate with employees in pursuing Occupational Health and Safety matters to protect all resources from accidental loss.

Protecting People & Property

In fulfilling our commitment to protect people, their property, and the environment, we will take the necessary steps to provide and maintain a safe and healthy work environment in accordance with industry standards and in compliance with legislative requirements.

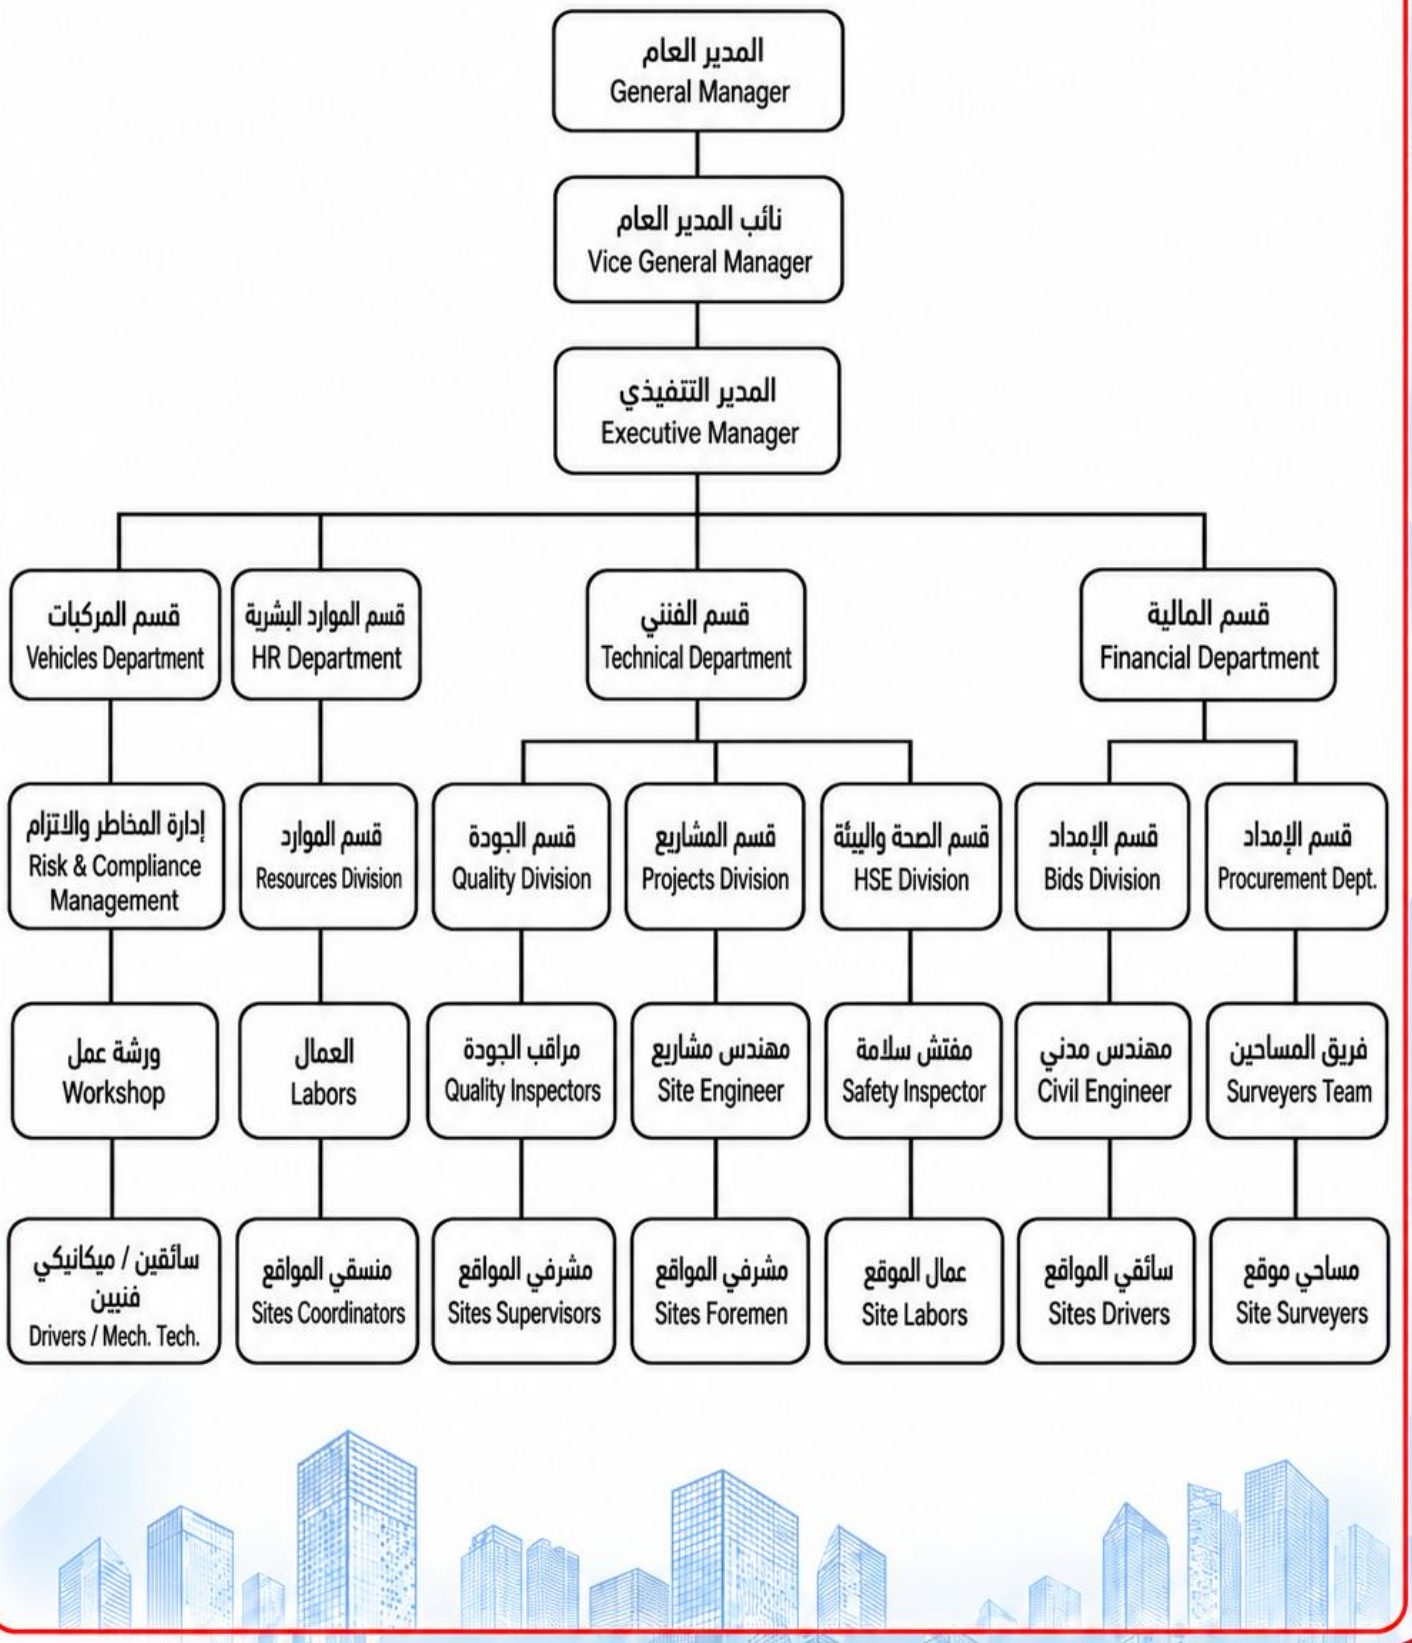

Accident Prevention

Our Work Safety Policy is based upon the belief that accidents can be prevented and property damage arising from accidents can be minimized. Accident prevention is paramount for both employees and the company.

ORGANIZATION CHART

Polyurethane Foam Spray Services

KRCC offers a wide range of turnkey specialty sprays and applied services for commercial construction projects.

KRCC provides installation services for various types of spray-applied polyurethane foam insulation. Our staff is trained in the latest installation and safety standards, and we are able to provide complete packages for large commercial works. High-efficiency thermal insulation and air barrier that seals walls, floors, and ceiling cavities to create an airtight building envelope, leading to long-term energy savings and a comfortable environment.

HIGH-EFFICIENCY THERMAL INSULATIOR AND AN AIR BARRIER THAT SEALS WALLS, FLOORS, AND CEILING CAVITIES TO CREATE AN AIRTIGHT BUILDING ENVELOPE

Polyurethane Foam Spray

We are experts, and we have the equipment to execute polyurethane foam spray for steel structure hangers.

Acrylic

We offer to use 2 coats of acrylic paint to ensure durable protection against water damage for residential and commercial properties.

Polyurethane Foam Spray

We specialize in efficient hangar waterproofing systems by the method of polyurethane foam spray.

Light Weight Foam Concrete

KRCC provides services of Lightweight foam concrete, which is a type of concrete that incorporates a foaming agent to create air bubbles within the mixture, resulting in a significantly lower density compared to traditional concrete. It offers excellent thermal insulation properties and is used in applications where reduced structural load is important, such as in filling voids, providing insulation, and creating lightweight structural elements. The foam concrete mixture typically consists of cement, water, foam, and sometimes other additives, making it suitable for a variety of construction and insulation purposes.

Guideline

Preparation of guidelines before pouring foam concrete to maintain the slope.

Water Proofing Solutions

We are professionals to can shed light weight concrete.

Light Weight Concrete Machine

We have a lightweight concrete machine to pour concrete.

Waterproofing by Black EPDM Procedure

KRCC provides installation services for EPDM (Ethylene Propylene Diene Monomer) which is a type of synthetic rubber commonly used for roof waterproofing. The EPDM roofing system involves applying large sheets of this rubber membrane to the roof surface. The material is durable and flexible, making it suitable for various weather conditions. The installation process often includes adhesive or mechanical fastening to secure the membrane. EPDM roofing is known for its longevity and low maintenance requirements, making it a popular choice for flat and low-slope roofs.

Screed Protection Layer

A screed protection layer is often used after installing EPDM (Ethylene Propylene Diene Monomer) roofing membranes to provide a protective barrier and enhance the durability of the roof system.

Water Proofing Solutions

We offer professional waterproofing services, ensuring durable protection against water damage for residential and commercial properties.

Aluminum Flashing

We specialize in efficient Aluminum flashing services, offering expert construction and installation for secure and functional aviation facilities.

Waterproofing by White on Black EPDM Procedure

Provides installation services for white on black EPDM (ethylene propylene diene terpolymer) which is a type of synthetic rubber commonly used for roof waterproofing. The EPDM roofing system involves applying large sheets of this rubber membrane to the roof surface. The material is durable, resistant to UV radiation, and flexible, making it suitable for various weather conditions. The installation process often includes adhesive or mechanical fastening to secure the membrane. EPDM roofing is known for its longevity and low maintenance requirements, making it a popular choice for flat and low-slope roofs.

Waterproofing by White PVC Procedure

KRCC provides installation services for PVC membranes, which are easy to apply using hot air welding for joints. The joints are homogeneously welded (PVC to PVC), ensuring a strong and leak-proof waterproofing system. No sealants or chemicals are required for joints (overlaps), and no adhesives or primers are needed for installation. PVC is a self-extinguishing material (safe in case of fire), resistant to high temperatures, and remains flexible throughout its lifespan. It can also be easily joined to new materials after installation, in case of extension or any mechanical damage.

Lightweight Concrete Layer

A lightweight concrete layer is often used before the installation of PVC membranes to maintain the slope and provide a stable surface.

Aluminum Flashing

We specialize in efficient aluminum flashing services, offering expert construction and installation for secure and functional building facilities.

Waterproofing Solutions

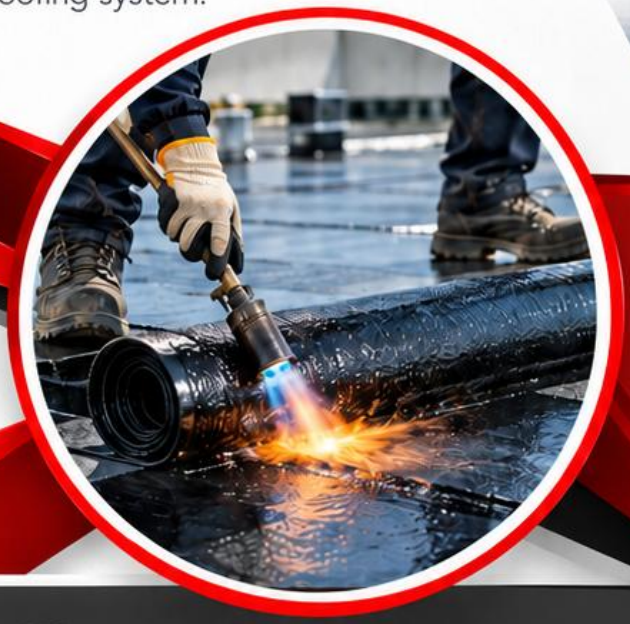

We offer professional waterproofing services, ensuring durable protection against water damage for residential and commercial properties.

Torch Applied Bitumen Membrane

KRCC provides installation services for torch applied bitumen membrane. Torch-applied bitumen membrane is a type of roofing material that consists of a bituminous waterproofing membrane that is installed using a propane torch to heat and melt the underside of the membrane. This allows the membrane to adhere to the roof substrate, creating a durable and waterproof roofing system.

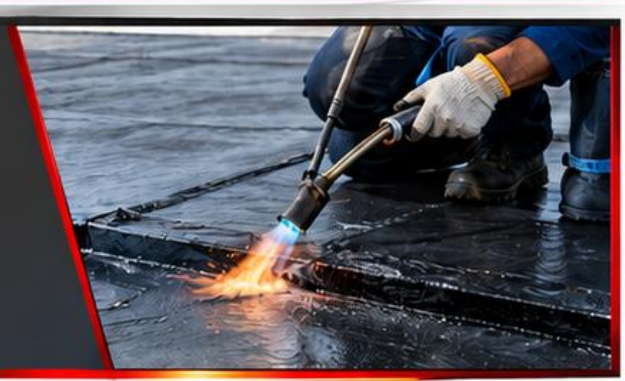

Torch Applied Bitumen Membrane

Torch-applied bitumen membranes are known for their durability, flexibility, and resistance to UV rays and weathering. They provide excellent waterproofing protection for flat or low-slope roofs.

Maintenance

Regular inspection and maintenance are recommended to ensure the integrity of the roof system. Any damage or wear should be promptly repaired to prevent water infiltration.

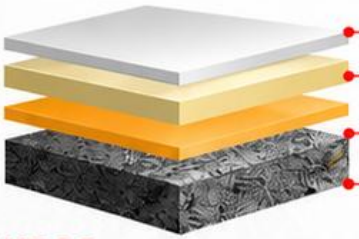

Torch Applied Bitumen Membrane

It is important to note that torching requires the use of an open flame, so safety precautions must be followed to prevent fire hazards. Proper training and equipment are necessary for safe installation.

GRP Lining in Concrete Tanks

KRCC provides installation services for GRP lining. GRP (Glass Reinforced Plastic) lining is a process where a layer of GRP material is applied to the surface of concrete tanks to protect them from corrosion, leaks, and other damage. GRP lining provides a barrier between the concrete and the contents of the tank, preventing chemical reactions and extending the tank's lifespan. The process typically involves preparing the concrete surface by cleaning and roughening it to ensure proper adhesion. Then, a layer of resin mixed with glass fibers is applied to the surface and allowed to cure. This creates a strong, impermeable lining that can withstand a variety of chemicals and environmental conditions.

GRP Lining Systems

Overall, GRP lining is a cost-effective solution for protecting concrete tanks and ensuring their long-term performance.

Repair

If there is any leakage during the leak test, our teams investigate the source and carry out proper repair using GRP materials to ensure a watertight and durable finish.

GRP Installation

GRP sheets are cut to the required dimensions to fit the shape of the tank. Care should be taken to ensure proper alignment and fit. The sheets are then laminated using polyester resin and glass fiber mat to form a continuous, strong and chemical-resistant lining.

Epoxy Flooring

KRCC provides services for Epoxy Flooring. Epoxy flooring is a type of flooring that involves applying a durable and long-lasting resin material called epoxy to a concrete surface. This creates a smooth, seamless, and attractive finish that is resistant to stains, chemicals, and wear-and-tear. Epoxy flooring is commonly used in industrial, commercial, and residential settings due to its durability, easy maintenance, and aesthetic appeal. It can come in a variety of colors and finishes, making it a versatile option for different spaces. Installation typically involves thorough surface preparation to ensure proper adhesion and longevity of the epoxy coating.

Epoxy Flooring

Epoxy flooring is a type of flooring system that involves applying a protective resin coating over concrete floors to create a smooth, durable, and attractive surface.

Epoxy Flooring Repair

Epoxy flooring repair typically involves addressing issues such as cracks, chips, or delamination of the epoxy coating. Here are some key points about epoxy flooring repair.

Epoxy Flooring Uses

Overall, epoxy flooring is a popular choice for garages, warehouses, industrial facilities, commercial and residential spaces due to its durability, aesthetics, and ease of maintenance.

Self Leveling Concrete

KRCC provides services for self-leveling concrete. Self-leveling concrete is a special type of concrete that is designed to flow easily and settle into a level surface without the need for excessive troweling or leveling. It is commonly used to create smooth and flat surfaces for flooring installations, such as tile, hardwood, or carpet. Self-leveling concrete is a great option for correcting uneven or sloping floors before installing a new floor covering. Just make sure to follow the manufacturer's instructions carefully when mixing and applying self-leveling concrete for the best results.

Self Leveling

Self-leveling refers to a property of certain materials, such as concrete or compounds, that enables them to automatically level or even out when applied to a surface.

Air Bubble Removal

To remove any air bubbles trapped in the compound, you can use a spiked roller or a squeegee to carefully move across the surface.

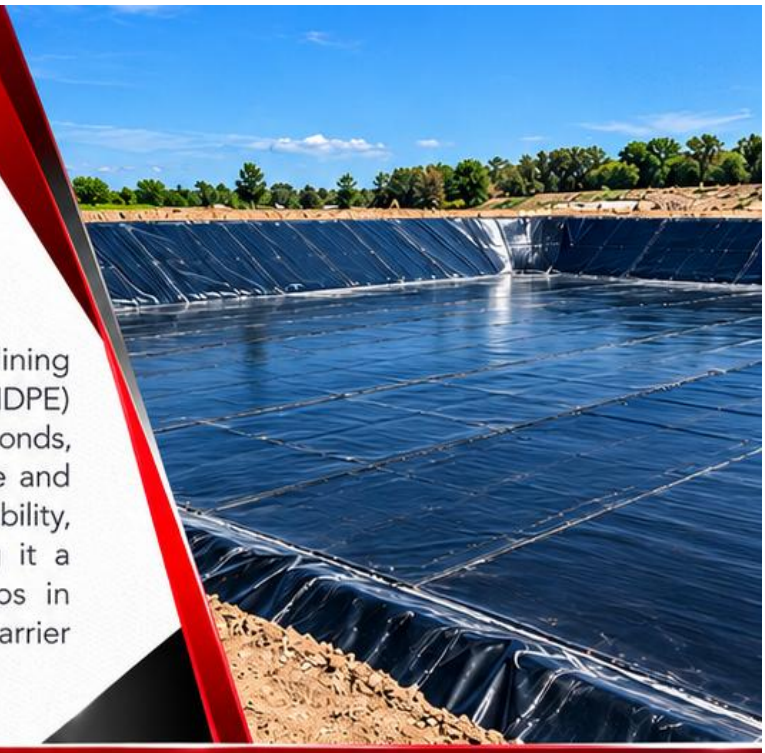

Self Leveling Uses

Self-leveling concrete is widely used to create smooth and flat surfaces for flooring installations, such as tile, hardwood, or carpet. It is also an excellent solution for correcting uneven or sloping floors in residential, commercial, and industrial spaces.

HDPE Lining

KRCC provides services for HDPE Lining. HDPE lining refers to the use of High-Density Polyethylene (HDPE) material for lining various structures such as ponds, landfills, pipelines, and tanks to prevent leakage and contamination. HDPE is known for its durability, flexibility, and resistance to chemicals, making it a popular choice for lining applications. It helps in protecting the environment by providing a barrier against pests and leakage of harmful substances.

HDPE Lining

It helps in protecting the environment by providing a barrier against seepage and leakage of harmful substances. HDPE lining is widely used in ponds, landfills, tanks, and other containment structures.

HDPE Repair

Repairing HDPE (High-Density Polyethylene) can be done using various methods, depending on the type and extent of the damage. Common methods include patching, extrusion welding, and hot wedge welding to restore the integrity of the liner.

HDPE Joint Welding

HDPE joint welding is a common method used to join High-Density Polyethylene (HDPE) pipes or sheets together. There are different techniques for welding HDPE joints, including hot wedge welding, extrusion welding, and fusion welding, which provide strong and leak-proof seams.

Wet Area Waterproofing

KRCC provides services for Cementitious waterproofing. Cementitious waterproofing is a popular method used to waterproof wet areas such as bathrooms, kitchens, basements, and swimming pools.

Material

Cementitious waterproofing materials are typically composed of cement, sand, and various additives that improve water resistance and adhesion. These materials form a waterproof barrier when applied correctly.

Application

The cementitious waterproofing material is mixed with water to form a slurry or paste, which is then applied to the substrate using a trowel or brush. Multiple coats may be required to achieve the desired waterproofing properties.

Curing

Proper curing is essential for cementitious waterproofing to achieve its maximum effectiveness. Curing times and methods vary depending on the specific product used, but typically involve keeping the surface moist for a specified period.

Cementitious Waterproofing

Some cementitious waterproofing products can bridge small cracks in the substrate, providing an additional layer of protection against water infiltration.

Maintenance

Regular inspection and maintenance of the waterproofed area are recommended to ensure the integrity of the waterproofing system over time. Any damage or deterioration should be promptly repaired.

Protection

Once the cementitious waterproofing layer has cured, it is important to protect it from mechanical damage during subsequent construction activities..

Ref : AW-CR-GEN-LE-2202025
Date : June 24, 2025
M/s. : **Khabeer Al Raida Contracting Company**
Subject : **Approved Applicator**

To Whom It may Concern,

This is to certify that Khabeer Al Raida Contracting Company is an authorized and approved applicator of Fosroc construction systems.

Through our ongoing business relationship, Khabeer Al Raida Contracting Company has consistently demonstrated the necessary technical expertise, qualified manpower, and practical experience required for the proper application of Fosroc products and systems. The company has successfully undergone the relevant training and technical orientation programs conducted and/or endorsed by Fosroc.

We further confirm that the personnel and applicators employed by Khabeer Al Raida Contracting Company are adequately trained and experienced in the installation and application of various Fosroc systems, including but not limited to:

1. Waterproofing systems and associated accessories.
2. Epoxy flooring.
3. Repair and protection systems related to waterproofing and epoxy applications.

the trained technician has been attended required training regarding the above subjected scopes and activities and they are mentioning below as a reference

1. Zaheer Abbas Bashir Ahmed
2. Muhammad Imran Muhammad Azam
3. Muhammad Muzammil Rasheed Ahmed
4. Mudassar Azam Muhammad Azam Raja
5. Muhammad Yasir Muhammad Jabri
6. Hanif Ur Rehman Quwat

Based on our experience and available records, Aliaa Company is considered qualified to execute projects involving Fosroc products, subject to compliance with project specifications, approved methodologies, and Fosroc technical recommendations.

This letter is issued at the request of Khabeer Al Raida Company for submission and reference purposes.
